1. To list out various tools used in your development , You have to produce the following table-

Tools used for specification phase	**Creately** Creately is a collaborative diagramming application built for project teams. Support many business diagram types including Flowcharts, Gantt charts and UML.
Tools used for design Phase	**Adobe Photoshop** Adobe Photoshop is a raster graphics editor developed and published by Adobe Systems for macOS and Windows.
Tools used for coding /development	**Visual Studio Code** Visual Studio Code is a source code editor developed by Microsoft for Windows, Linux and macOS. It supports debugging. It also provides embedded Git control, syntax highlighting, intelligent code completion, snippets, and code refactoring. **Ionic** Ionic is a complete open-source SDK for hybrid mobile app development. Built on top of AngularJS and Apache Cordova. Ionic provides tools and services for developing hybrid mobile apps using Web technologies like CSS, HTML5, and Sass. **Koha Library System** Koha is an open source Integrated Library System (ILS), used world-wide by public, school and special libraries. **REST Easy** REST Easy is a Firefox add-on that provides a full-featured REST client in the browser. **Firebase** Firebase is a mobile and web application platform with tools and infrastructure designed to help developers build high-quality apps. **Slim Framework** Slim is an ideal tool to create APIs that consume, repurpose, or publish data.
Tools used for assessment of code quality	**JS Complexity Analysis** Produce a complexity analysis report of your JS project
Tools used for Testing	**Karma + jasmine + Visual Studio Code** Jasmine is a framework for providing both unit testing and end-to-end, acceptance testing. Coupled with Karma, Jasmine can monitor file changes to our client-side code and execute tests on every file change in

	order to ensure that all tests are always passing.
Tools used for team collaboration(git is default value in this)	**GitHub** GitHub is a web-based Git repository hosting service. It offers version control and source code management (SCM) functionality and many more features. It provides collaboration features such as bug tracking, feature requests, task management.
Tools used for project management if any	**Slack (Primary)** Slack is cloud based team collaboration software tool used to manage project teams and share knowledge. **WhatsApp (Secondary)** It is a cross-platform messaging tool used to send text, voice and video messages to an individual or a group. **Gmail** Gmail is a free, advertising-supported email service developed by Google.
Tools used for performance analysis of the application , if any	**Karma + Jasmine** Generates a coverage report including analysis.

2. Tools may be very specific to your application so spend time and search for them meritoriously and then only list out.
